

1. simulate

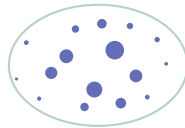

A lot of candidate patients,
from a deliberately wide prior.

2. filter

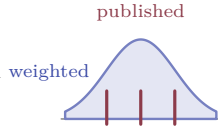

Discard the ones that are
not biologically possible.
What is left is *the cloud*,
and it never changes again.

3. weight

Give each survivor a preva-
lence weight, chosen so the
weighted cloud reproduces
the published numbers.

matched

Nothing about the param-
eters is estimated. The
weights *are* the answer.
